## WHAT IS Hydratag?

Hydratag is an easy to use, low cost hose management system that can be integrated into any business without fuss. Using a Mobile App that utilises Near Field Communications (NFC) technology, Hydratag is a reliable and versatile cloud based system.

### Ideal for:

- breakdown situations where hose assembly failure(s) result in significant and costly delays to your business.
- scheduling preventative maintenance for plant and equipment used on a single or multiple site operation, locally or nationwide.

## HOW IT WORKS:

Your Mobile Technician uses a mobile app to “Tap and Tag” a Hydratag (NFC Hose Tag), which captures all the relevant information regarding your hose assembly. The Hydratag is affixed to the hose assembly via cable ties.

**NFC Hose Tag:** Simple and effective set up for identifying and tagging of hose.

- ▶ Low cost single use tag is made from durable materials.
- ▶ High resistance to impact, UV, chemicals and temperature (up to 110°C).
- ▶ Simple and effective cable tie attachment to hose assembly

**Hydratag:** Fast and reliable cloud-based set-up.

- ▶ No subscription costs to access the hose database.
- ▶ Android enabled mobile app

**Hydratag is designed to minimise unproductive downtime resulting from the breakdown of hoses; or be used to maximise the service hours of your hoses between replacement intervals**

## Hydratag™ FOR BREAKDOWNS

In the event of a hose assembly failure, critical repair time can be lost from the time it takes a mobile technician to arrive on site, to ascertaining the hose assembly details before repair can begin. More time can be lost if a Mobile Technician needs to return to base to collect non-standard parts, and this can be made worse when the breakdown occurs at remote locations.

The cloud based Hydratag Hose Management system can be used to quickly retrieve any hose assembly information relating to any plant, equipment or machinery. If required, the replacement hose build can be completed prior to arriving on site.

### Key benefits to minimise machinery down time

- Rapid replacement and accurate replica of hose assembly (size, length, fittings orientation etc)
- Versatile communication. The option to use the Hydratag App, or to quote the unique Tag ID number
- Easy to use Hose Management system - fully trained in a matter of minutes
- Authorised access to hose assembly information to those within your team. Does not restrict the information to the original installer.

## Hydratag™ FOR PREVENTATIVE MAINTENANCE

In conjunction with your Hydraulink service technician you get access to a secure web-portal to analyse and report on the performance of your plant and equipment. Ideal for managing small to large operations, Hydratag can assist in the maintenance of plant, or fleets of equipment and machinery by optimising the service hours of your hoses between replacement intervals.

### Key benefits to improve operational reliability:

- Troubleshooting repeated hose failures to improve operational reliability
- Hose replacement schedule with the use of automated email alerts
- Simple and effective set up for identifying and tagging of hoses on site
- Secure database to those within your network
- Full reporting capabilities, with output to Excel and PDF
- Simplified planning of refits and planned maintenance
