

CERTIFIED HOSE ASSEMBLIES

Hydraulink[®]
Hose Solutions

ABOUT HYDRAULINK

Hydraulink are a leading manufacturer and supplier of hose and fittings, with over 400 service points throughout Australia, New Zealand and the Asia Pacific Region.

We operate a 24/7 mobile service, allowing you to rely on us whenever you need assistance - anytime, day or night. We are committed to getting your business back on track with minimal downtime.

From our rapid repair service to workshop expertise and on-site support at remote large-scale projects, Hydraulink are there to give you the right products and services at the right time. Our goal is to deliver maximum value alongside unparalleled service, creating long-term business relationships.

HYDRAULINK'S DNV OFFERING

Hydraulink are able to offer DNV certification for our range of hose and fittings. We not only have the relevant Type Approval, but also the Approval of Manufacture to fabricate and test hose assemblies in multiple Hydraulink locations.

Hydraulink's DNV certification provides a high level of accountability for maintaining standards compliance, quality and safety, which are all crucially important in marine industries, due to remote locations ships work. Hydraulink's ISO 9001 quality system and nationally recognised training program supports the DNV certification to ensure quality, fit for purpose hose assemblies for one of the most demanding and reliant applications for a hose. The supply, repair and maintenance are key components of the service Hydraulink provides to marine industries.

HYDRAULINK 24/7 ONSITE & MOBILE SERVICE

Operated by fully trained and skilled technicians, Hydraulink 24/7 Mobile Service Fleet can install DNV certified hose assemblies and carry a comprehensive range of hose, fittings and accessories to keep your equipment moving and minimise your downtime.

HYDRAULINK QUALITY & TRAINING

Hydraulink understand that the breakdown of plant and equipment can impact on productivity and profitability. This is why we are proudly ISO9001:2015 quality certified to manufacture, supply and distribute hydraulic hose and fittings and provide assembly, testing, sale, rapid repair and service of hydraulic hoses, fittings and hydraulic industrial products.

Hydraulink's technicians are trained and third party certified to nationally recognised units of competency. Each hose assembler is further examined by DNV to their rigorous standards for approval.

Hydraulink hold these qualifications for braided and spiral hoses, with both mild steel and stainless fittings.

HYDRAULINK QUALITY STANDARDS

CERTIFIED HOSE ASSEMBLY REQUIREMENTS

1 TYPE APPROVED PRODUCTS

These are Hydraulink products that have been issued a DNV “Type Approval Certificate” for use on ships with strict conformity to specified standards. All “Type Approved” products undergo rigorous testing including dimensional tolerance checks, burst and impulse testing, chemical resistant analysis and temperature and fire tests.

2 QUALITY ASSURED & TRAINED ASSEMBLERS

Hydraulink are accredited to ISO 9001 – 2015 for the manufacture and supply of hydraulic hose, fittings and assemblies including testing service and rapid repair. As part of our certified ISO 9001/2015 Quality System all Hose Assemblers are required to complete the Hydraulink Sales and Service Technician (HSST) certificate of competency training course which is nationally recognised by ASQA (Australian Skills Quality Authority)

3 APPROVAL OF MANUFACTURE (AoM)

To obtain a (AoM) certification, Hydraulink facilities and personnel are required to be audited and certified by a DNV Surveyor. This ensures compliance with our ISO 9001 – 2015 procedures and that all DNV-GL product testing, standards and traceability rules are met.

4 TESTED ASSEMBLIES

Under DNV standards all Hydraulink hose assemblies are individually pressure tested to ensure compliance. Each hose assembly is individually identified and supplied with a unique test certificate.

5 TRACEABILITY TAGS

Under the DNV rules each hose assembly must be tagged for traceability. At Hydraulink we utilise stainless steel “Navy Tags” which records hose assembly and test data, date of installation and vessel ID.
